

Artist's rendering of the New Clinical Cancer

NYU Clinical Cancer Center

New York, New York

The new NYU Clinical Cancer Center Institute Outpatient Facility will be located at 160 East 34th Street. It will provide 85,000 square feet of space on 13 levels – two below ground and 11 above – and will be staffed by some 200 employees. The Clinical Cancer Center will include several multidisciplinary clinical care centers; each of these specialty centers will focus on the care of patients with specific cancers, such as those of the breast and female reproductive system, digestive tract, prostate, brain, lung, blood, head and neck, and skin (melanoma).

Mueser Rutledge Consulting Engineers (MRCE) provided borings, geotechnical report and general consulting for the project which will be operational by the Summer 2004.
